

THE ARBORETUM AT PENN STATE

Geology Scavenger Hunt

There are many interesting rocks in the botanic gardens. How many can you find?

Fossilized burrows made by marine animals.

Pits on a map, showing sites where iron was mined.

A boulder with a hole that goes all the way through.

Sandstone rocks with interesting mottled patterns on them.

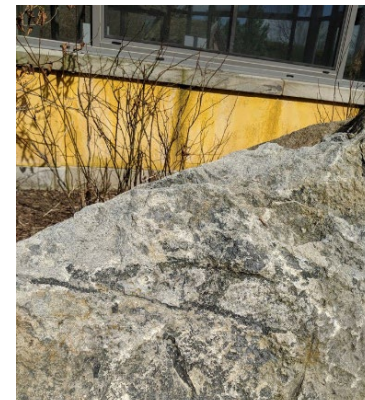

A trilobite.
Pennsylvania's state fossil is the trilobite *Eldregeops rana*!

A boulder covered with colorful minerals.

Sculptures of corals that lived hundreds of millions of years ago, when Pennsylvania lay beneath the ocean.

A rock with a real fossil plant on it.

Stalactites in a cave.
